

**CS/ECE 374 A (Spring 2022)**  
**Homework 3 (due Feb 10 Thursday at 10am)**

**Instructions:** As in previous homeworks.

**Problem 3.1:** For each of the following languages in parts (a), (b), and (c), describe an NFA that accepts the language, using as few states as you can. Provide a short explanation of your solution. Below,  $\#_0(x)$  and  $\#_1(x)$  denote the number of 0's and the number of 1's in  $x$  respectively.

- (a) (30 pts) all strings  $x \in \{0, 1\}^*$  such that ( $x$  ends with 10101 or 11011) and ( $\#_0(x)$  is divisible by 3 or  $\#_1(x)$  is divisible by 3).
- (b) (30 pts) the language defined by the regular expression  $((01)^*0+2)(100)^*1)^* \cdot (1^*+0^*2^*)$  over the alphabet  $\{0, 1, 2\}$ .
- (c) (10 pts) all strings in  $\{0, 1\}^*$  that contains the pattern  $0?1?0$ , where “?” denotes “don't care” (i.e., a single symbol that is either 0 or 1); in other words, the language defined by the regular expression  $(0+1)^* \cdot 0(0+1)1(0+1)0 \cdot (0+1)^*$ .
- (d) (30 pts) Convert your NFA from part (c) to a DFA by using the subset construction (i.e., power set construction). [Note: don't include unreachable states; also, several accepting states can be collapsed into one in this DFA.]

**Problem 3.2:** Given a language  $L$  over the alphabet  $\Sigma$ , define

$$\text{MOVE-BACK}_8(L) = \{xyaz : xyz \in L, x, y, z \in \Sigma^*, a \in \Sigma, |y| \leq 8\}.$$

Prove that if  $L$  is regular, then  $\text{MOVE-BACK}_8(L)$  is regular.

(For example, if  $010010100110011 \in L$ , then  $011001010010011 \in \text{MOVE-BACK}_8(L)$ .)<sup>1</sup>

[Hint: given an NFA (or DFA) for  $L$ , construct an NFA for  $\text{MOVE-BACK}_8(L)$ . Give a formal description of your construction. Provide an explanation of how your NFA works, including the meaning of each state. A formal proof of correctness of your NFA is not required.]

---

<sup>1</sup>...and also  $010101010010011 \in \text{MOVE-BACK}_8(L)$ , and  $010011010010011 \in \text{MOVE-BACK}_8(L)$ , ...,  $010010100110011 \in \text{MOVE-BACK}_8(L)$ .

For a different example:  $\text{MOVE-BACK}_8(0^*1^*) = 0^*1^* + 0^*101^* + 0^*1001^* + 0^*10^31^* + \dots + 0^*10^81^*$ .
