

Give regular expressions for each of the following languages over the alphabet  $\{0, 1\}$ .

- 1 All strings containing the substring 000.
- 2 All strings *not* containing the substring 000.
- 3 All strings in which every run of 0s has length at least 3.
- 4 All strings in which 1 does not appear after a substring 000.
- 5 All strings containing at least three 0s.
- 6 Every string except 000. (**Hint:** Don't try to be clever.)

**Work on these later:**

- 7 All strings  $w$  such that *in every prefix of  $w$* , the number of 0s and 1s differ by at most 1.
- 8 (**Hard.**) All strings containing at least two 0s and at least one 1.
- 9 (**Hard.**) All strings  $w$  such that *in every prefix of  $w$* , the number of 0s and 1s differ by at most 2.
- 10 (**Really hard.**) All strings in which the substring 000 appears an even number of times.  
(For example, 0001000 and 0000 are in this language, but 00000 is not.)
